

Proposed new performance measure for Centre City and the Developed Areas

Performance Measure	2015 Target	2016 Target	2017 Target	2018 Target
The annual change in the number of hectares of land within local area plans that are compliant with the Centre City Guidebook or Developing Areas Guidebook based on an updated local area plan	NA	NA	1,400 ha	700 ha

A policy measure

This report recommends one new performance measure: the annual change in the number of hectares of land that are compliant with the Centre City Guidebook and the Developed Areas Guidebook, based on new or updated local area plans.

This measure will track Administration's success in bringing on new policies that implement the Municipal Development Plan's goals for strategic growth and intensification in the Centre City and the Developed Areas.

Setting targets

A performance measure contains both a measure and a target. To establish the target, Administration reviewed the historical activity and current work on local area plans that are in development and on track for approval in 2017 and 2018. This will include the current intensive planning work associated with the proposed Green Line Light Rail Transit expansion. The Green Line work encompasses a number of communities containing large areas of land.

Based on this review a target of 1400 ha is proposed for 2017, and 700 ha per year for 2018.

Administration will assess the effectiveness of this measure during 2017/2018, report on it in Action Plan, and develop one or more robust and proportionate measures for the 2019-2022 business planning cycle.
