The City's Capital Investment – Delivering Value to Calgarians

Executive Summary

In response to the downward shift in the economic environment, Infrastructure Calgary continues to make progress on The City's Capital Infrastructure Investment Strategy and find ways to deliver value to Calgarians through capital investment.

The focus of this report is on recent capital investment activities at The City, including the introduction of a Capital Investment Plan (Investment Plan). The proposed Investment Plan outlines how The City can work with other levels of government, the private sector and public institutions to align and optimize respective capital investments to create jobs, build and maintain needed infrastructure and attract and retain people, business and investment.

To support potential new investments in Calgary, Infrastructure Calgary conducted a comprehensive capacity review within the organization to identify funding that can be allocated to generate value for Calgarians. Administration will return to Council no later than Q2 2017 with specific recommendations for new, or currently unfunded investment projects, that will deliver social, economic and environmental value to Calgarians.

Background

As detailed in Attachment 1, *The City's Response to the Change in the Local Economy*, The City is responding and working to address the needs of Calgarians in light of economic changes in the community. The City has conducted, and continues to conduct, research about the needs and changing priorities of Calgarians by gauging their perceptions on quality of life, the economy and infrastructure investments. Findings indicate that Calgarians perceptions about quality of life and the economy have weakened. A majority of Calgarians believe that The City has an impact on their quality of life and an obligation to support the local economy. There continues to be support for The City to prioritize infrastructure investment as a way to improve quality of life and agreement that now is a good time to invest in new projects (*Economy, Quality of Life and Infrastructure Survey Report, August 2016*).

Over the past year, The City has been working to address the needs of Calgarians through increasing the quality and velocity of capital investment through its Capital Infrastructure Investment Strategy. While this remains a focus, Infrastructure Calgary is working to create both short term and long term value for Calgarians through a proposed Capital Investment Plan. The Investment Plan proposes to use internal efficiencies and identify existing capacity. The Plan does not rely on any new taxes or debt.

Capital Infrastructure Investment Strategy – progress to date

Infrastructure Calgary has continued to advance work on the nine strategies within the Capital Infrastructure Investment Strategy (Schedule 1). The 2016 recast process engaged business units across The Corporation to provide revised cash flow forecasts and a more refined capital budget which Council approved on 2016 September 26 (Strategy 1). This work provided greater insight into the status of capital projects and identified funds that could be reallocated to other capital projects. The capital budget recast resulted in a change in the 2016 budget from \$3.2 billion to a more achievable \$1.6 billion. This intentional corporate focus aims to increase the capital investment from the annual average (over the last five years) of \$1.2 billion by more than 25%.

Infrastructure Calgary has led work across the organization to review funding sources and ensure that The City is in alignment with federal and provincial government initiatives, and is working with other levels of government to identify priorities for infrastructure investment. Infrastructure Calgary is working with business units to consider funding sources, free unrestricted funding and shift funds where possible to ensure The City maximizes all available grant funding (Strategies 3 & 4).

Infrastructure Calgary has also reviewed the current allocation of funding across the organization and worked to identify additional funding capacity within the existing Council approved capital budget (Strategy 5). There is potential to reinvest this capacity through a Capital Investment Plan that focuses on investments that will add significant value and benefit to the larger Calgary community.

As part of Infrastructure Calgary, the Accelerating Capital for Economic Resiliency (ACER) program has worked with internal stakeholders to expedite capital project delivery by streamlining and clarifying project delivery processes. ACER initiatives have enhanced The Corporation's capital project delivery capacity and helped increase the capital spend rate, successfully increasing the velocity of capital expenditures. The program has also established a system to increase resource capacity in roles that support capital project work (Strategies 6 and 7).

While ACER will continue to introduce process improvements within the Infrastructure Calgary program, Infrastructure Calgary is shifting focus on other areas of the Capital Infrastructure Investment Strategy, working to optimize the existing capital budget and focus on investments that will deliver lasting social, economic and environmental value to the Calgary community.

Proposed Capital Investment Plan – reposition The City's current investment, focus future investments and deliver value

The proposed Capital Investment Plan outlines how The City can work with government, private sector and public institutions to align and optimize respective capital investments (Schedule 2). It is based on the premise that a more strategic and cohesive approach to investment will result in greater collective benefit for the public, the individual organizations and the Calgary region. It supports the transition of the existing capital budget into an investment strategy that maximizes existing funds and enables The City to leverage investment from the private sector and other levels of government. Working together, The City and its partners can maximize investment to create jobs, build and maintain needed infrastructure and attract and retain people, business and investment.

The Investment Plan is based on geographic, theme and community investments, and outlines specific investment areas in each of these categories. The Investment Plan is also aligned with Council Priorities and Calgary Economic Development's 10-year economic strategy for Calgary. The City leads on some of these investment areas and is a partner, and sometimes a supporting player, on others.

It is important to note that The City's overarching priority with regard to capital investment is to maintain The City's existing infrastructure assets. Maintenance and lifecycle funding is core to supporting the social, economic and environmental services provided by The City. This is supported by a robust City asset management policy, strategy, plan and guidelines. The Infrastructure Status Report is produced every four years (next publication is 2018) and provides answers regarding what The City owns, its value, condition, remaining service life and information on the infrastructure funding gap. The capacity identified for re-investment in new, or currently unfunded projects, is beyond what is needed for maintenance and lifecycle.

Stakeholder Engagement – collaboration to shape the Capital Investment Plan and optimize investment

Administration has been meeting and working with a wide variety of external partners to discuss The City's capital priorities and how to align investment to facilitate economic growth. The City has hosted and participated in roundtables with the construction, finance and engineering industries, as well as met with business leaders, post-secondary institutions and developers. The City is working closely with Calgary Economic Development to align their investment strategies and engage with other key stakeholders. The discussions and input to date have led to the creation of the proposed Capital Investment Plan.

The City has been, and continues to conduct, qualitative and quantitative research with Calgarians to understand their perspectives on the economy, quality of life, infrastructure investment and overall satisfaction levels. The results from the research continue to inform The City's approach to capital investment, infrastructure priorities and The City's role in the economy.

The City has also been collaborating with the provincial and federal governments to identify investment priorities and advocate for capital investment in the Calgary region. The City is making a conscious effort to align its investment in areas where the provincial and federal governments have made significant capital investments in Calgary. The City will continue to strengthen existing and build new partnerships to further align investment and create opportunities to deliver value to Calgarians.

Corporate Capacity Review – efficiencies to support future investment

To identify funding that can be used for investments within this plan, Infrastructure Calgary completed a comprehensive capacity review. This review looked at every potential source of funding available, including:

- 1. Review of low risk projects that could be stopped or delayed
- 2. Review of projects that have no spend to date
- 3. Reserve funds available (corporate and business unit), including:
 - Lifecycle, Maintenance and Upgrade Reserve (LMUR)
 - Reserve for Future Capital (RFC)
 - Fiscal Sustainability Reserve flood related (FSR)

- 4. Offsite levy funding*
- 5. Any unallocated capital funds, including:
 - Capital budget savings account
 - release of contingency funds
 - funds available due to more refined class estimates
 - relinquishments
 - procurement awards that came in under budget
- 6. Federal and Provincial grant funding, including:
 - Municipal Sustainability Initiative
 - Future grant money
- 7. Tax room
 - Focused on the \$29M that will become available in 2019
- 8. Community Revitalization Levy
- 9. Debt capacity this is a financing and not a funding source

*Administration is working to identify and prioritize projects that will leverage private investment, meet Calgary's social and infrastructure needs, and deliver design and construction jobs. The recommended projects will be in developed, greenfield, and industrial areas and will support strategic growth decisions and market competitiveness by providing investment in a range of geographic areas and business sectors.

As Infrastructure Calgary progresses its work, there will be further investigation into all of these areas and a coordinated effort to ensure any capacity is identified on an ongoing basis and can be utilized for other projects. As per the approved recommendation at the 2016 July 20th Transportation and Transit committee meeting, Infrastructure Calgary is currently working on:

- a. Changes to the City's capital budgeting process, including but not limited to consideration of Class 1-5 cost estimating process;
- b. Criteria used to rank capital projects;
- c. Criteria for determining the appropriate contingencies for projects; and
- d. The Council approval process in relation to cost estimates, contingencies, budgets and scope changes.

Through this work, corporate standards and processes will be identified. Administration will provide a progress report to PFC prior to December 31st of this year.

Next steps – assess investment opportunities and bring

recommendations to Council

Council has an opportunity to confirm their current investment and consider where the identified capacity can be used for re-investment. With the federal government's anticipated \$120 billion dollar infrastructure investment program over the next ten years, creating capacity to maximize and match

grant funding is critical. Leveraging available grant money from other levels of government will help The City to continue to take advantage of favourable pricing in the market and further build on the benefits already generated from The City's 2015 and 2016 capital investment. The funding can also be used for new projects, to advance projects that are currently unfunded, projects that will leverage private investment and possibly a large 'catalyst' project.

Over the next several months, Infrastructure Calgary will continue to reposition the capital budget and return to Council no later than Q2 2017 with specific recommendations for new, or currently unfunded investment projects that will deliver social, economic and environmental value to Calgarians. The approach to repositioning will be based on the geographic, theme and community investment areas identified in the proposed Investment Plan.

Schedule 1: Capital Infrastructure Investment Strategy

Administration's proposed Infrastructure Investment Strategy review will work in conjunction with the Accelerated Capital for Economic Resilience (ACER) project to address several areas that have caused low capital spend rates in the past. Specifically, the strategy will:

1. Critically examine and recast cash flows

One of the reasons for the low capital spend rate is that not enough rigour has been put into forecasting the cash flows of capital projects. This results in budgets that do not reflect the anticipated cash flow, leading eventually to budget deferrals. Critically examining the cash flows is anticipated to yield a more realistic capital budget. This may also free up funding in some years to advance shovel ready projects that are budgeted in later years. The recast capital budget will be presented to Council in the Budget Finalization report in Q2 2016.

2. Determine the priority projects

Administration will review the prioritization of capital projects, taking a more corporate view of prioritization, understanding restricted funding sources. Rather than allocating funding to Departments to apply to the individual priority lists, the corporate priority list will be developed, with funding allocated on a project by project basis. A revised priority list will be presented to Council as part of the mid-cycle adjustment process.

3. Align with Federal and Provincial Government Initiatives

Administration will review Federal and Provincial governments' announcements to identify incremental funding initiatives. Administration will also work with these governments to identify priorities and processes for infrastructure investment and align The City's capital investment priorities accordingly.

4. Review funding sources and switch accordingly

Building off the corporate priority list, the funding sources will be considered and allocated on the basis of the most restricted sources first, in an attempt to free unrestricted funding.

5. Review allocation of funding

The current allocation of funding will be reviewed and redistributed to best meet the corporate priority list. This will result in the revised capital budget to be presented to Council in 2016 November as part of the mid-cycle adjustments.

6. Standardize processes

Cash flow estimation, procurement and permit application processes will be standardized to the greatest extent possible in order to gain efficiencies and remove key bottle necks that constrain spending.

7. Fund additional resources

Fund capital project acceleration initiatives through an increase of the existing corporate project management charge against capital budgets from up to 0.5% to a maximum of 1.5%.

Funding will be used to augment capital project delivery capacity in key areas such as Law and Supply Management. It will also support the implementation of cross functional teams focused on delivering capital projects efficiently and effectively. This funding will only be used as required and appropriate controls will be established.

8. Examine ways of involving the private sector to a greater extent

Discussions will include the private sector to determine the degree to which their participation can be increased in order to speed processes and delivery of infrastructure.

9. Identify and approve associated operating budget funding

The operating costs of new capital projects must be identified and any associated incremental Operating Budget funding relating to those projects be approved along with the Capital Budget funding associated with those projects.

Schedule 2: Proposed Capital Investment Plan

Background

Capital investments across Calgary from government, private sector, public institutions and partner organizations are typically focused on individual projects and organizational goals. The lack of alignment and coordination leads to competition for public support, funding and resources, and can prevent the achievement of mutually beneficial outcomes. A more strategic and cohesive approach would result in greater collective benefit for the individual organizations and the broader Calgary community.

Opportunity

Government, private sector and public institutions align, where feasible, individual capital investments to bring social and economic value to the larger Calgary community. The City of Calgary will work with business, other levels of government and community partners to optimize investment in Calgary through a Capital Investment Plan. The Capital Investment Plan is based on geographic, theme and community investments. By working together, The City will provide a clear vision to citizens, create jobs, build and maintain needed infrastructure, improve investor confidence, attract people and business and enhance Calgary's global reputation.

Through conversations and engagement with council and external partners over the next six months, The City will reposition its investment strategy and strategically focus capital dollars on projects that enhance the Calgary region as proposed below¹. Some of the investment areas will be led by The City, and others supported by The City.

Geographic Investments

1. Inland Port and Logistics District

Investment focus is the lands surrounding the Calgary International Airport and includes northeast industrial and commercial lands.

Calgary is well positioned as a transportation hub and inland port for Western Canada. It has the advantages of competitively priced industrial lands, critical infrastructure (Calgary International Airport, intermodal yards, road connections) and is poised to develop a distribution centre park to support ecommerce, fast moving consumer goods and technology development. If The City aligns its capital investment with private and government investment to better position Calgary as an inland port, it can significantly benefit, and provide economic value, to the Calgary region. Calgary Economic Development anticipates that over a three year period there will be a net economic impact of \$350 million dollars. This includes 89 companies being retained, expanded and/or attracted, 5000 direct and indirect jobs

¹ The economic and social value of these investments will be further refined and communicated over this time.

created and/or attracted and approximately \$375 million in capital investment². Investment in this area will strengthen Calgary's regional distribution network, transportation and logistics infrastructure and enable private sector businesses to capitalize on Calgary's geographic advantages.

2. Culture and Entertainment District

Investment focus is the areas downtown east of Centre Street, the Rivers District, Victoria Park and the Stampede grounds.

A centre for arts, culture and entertainment (including professional sports) that appeals to a wide variety of people and brings them together has a tremendous impact on the cultural life of a city. Creative spaces and amenities, in a well located, accessible area bring social value by creating a liveable, vibrant and diverse city that draws people and enriches daily life. Dynamic cities that offer a variety of cultural experiences, including theatre, dance, sports, music, dining, a variety of housing options and shopping, attract people and business and bring economic value to a city. A collaborative investment and strong partnerships to build the facilities and amenities needed to support a culture and entertainment district in Calgary will foster the arts and professional sports and further enable Calgary to host high profile events, attract tourism and business, and support employment and retail in the downtown.

3. Innovation, Education and Wellness District

Investment focus is the city's northwest near the Foothills Medical Centre, University of Calgary campus and McMahon Stadium.

Cities are key to innovation in a global economy where knowledge and learning are the primary factors in economic success. The basis of successful economic activity is innovation, which is fostered through the exchange of ideas where there is a high concentration of people and firms working in different fields in the same location³. The city's northwest is evolving into such an innovation hub. Technology, business, research, athletics and entrepreneurship are coming together to create an innovative ecosystem that is driving advances in medicine, technology and economic diversification and providing multiple benefits to the community. Focusing investment in this district will optimize the investment being made by other levels of government in this area and contribute to the incubation of ideas and enterprises. Having a dynamic mix of commerce, technology, and a readily available workforce in close proximity (through housing diversity and availability) will enhance the quality of life and the well-being of Calgarians and create an innovative and productive place to live, play, study and work.

Targeted Theme Investments

1. Transit and Transportation

² These numbers are based on Calgary Economic Development achieving certain metrics in positioning Calgary as Western Canada's Inland Port. These numbers are preliminary estimates and will be refined over the next few months in conjunction with The City of Calgary's Corporate Economics group. ³ Slack, Enid. (2004, December). *Models of Government Structure at the Local Level.*

All three levels of government are poised to invest several billion dollars in Calgary's transportationrelated infrastructure. Investment in this area helps provide frequent, safe, convenient and affordable access to transportation for Calgarians, further improves transportation and mobility efficiencies and ensures ongoing service of existing infrastructure.

2. Main Streets

Main Streets are important public spaces along major transportation routes that attract Calgarians to socialize, work, live, shop, dine and celebrate local events. Investing in the maintenance, upgrading or delivery of new infrastructure to support these activities ensures Calgary public spaces contribute to the delivery of a great city. An initial 24 main streets projects have been identified across the city that will complement private mixed-use, residential and commercial investments.

3. Housing

Ensuring a complete spectrum of non-market and market housing options is an important part of the social and economic infrastructure of a healthy and inclusive city. Facilitating the delivery of new housing, and investing to maintain existing assets further strengthens housing access. Aligning Federal, Provincial and City of Calgary investments in affordable housing coupled with private investment in market housing is essential for attracting and maintaining a diverse workforce, ensuring economic development and vitality, and creating a place for everyone, from university students to an aging population.

4. Education

Post-secondary institutions and partner organizations continue their focus on expanding opportunities for student enrolments and re-training Calgary's displaced oil and gas professionals. The City is looking at ways to continually attract students to all post-secondary institutions in Calgary, partner where possible to support higher enrolment and capacity at these institutions and keep the talent in the city.

5. Resilience

Calgary has been granted membership to the Rockefeller Foundation's 100 Resilient Cities network which will assist Calgary with environmental, social, natural and economic disruptions. This membership provides funding to strengthen existing infrastructure and support new investments. Continued partnerships with other levels of government and institutions on investments in climate change, green technology, flood recovery, green energy sources, and bio-diversity and waste reduction initiatives.

Community Investments

1. Schools

Providing and maintaining schools within communities ensures access to education, proximity of services and the further supports the delivery of complete infrastructure to communities. This theme includes building new, modernizing and *repurposing* surplus school infrastructure. The Provincial government continues to invest in Alberta's school infrastructure.

2. Multi-Service Facilities

Community infrastructure provides the services that form the heart of our communities and support the needs of citizens. As this infrastructure ages there is an opportunity to strategically invest to ensure the appropriate facility supports the needs of our citizens. Coordinating community facilities investment amongst multiple parties enables greater economies of scale and the ability to meet citizen needs through the provision of multiple services. Opportunities for integration include, but are not limited to, community associations, recreation centres, transit, fire stations, libraries, affordable housing, existing facility revitalization and service counters.

3. Parks and Public Spaces

Providing and maintaining quality public parks and open spaces strengthens communities, supports economic development, promotes health and wellness and increases cultural unity. The City continues to partner with public and private investors to improve the availability of recreation opportunities in underserved areas and ensure the protection, conservation and restoration of natural areas and provide spaces for a range of community services and programs.

Several Calgary community associations recently received funding from the Government of Canada through the Canada 150 Community Infrastructure Program and many improvements to Calgary's park spaces are either planned or currently underway.

4. Growth Infrastructure

Calgary continues to be a growing city with new and developing residential communities, industrial lands, commercial developments and redevelopment opportunities. The City of Calgary is partnering with the development industry on funding and delivery of growth related infrastructure and area-based investment planning.
