The Net Zero Development Working Group was assembled by City Administration to share ideas on how The City can support high performance development through the Land Use Bylaw. The group is comprised of members of the development industry and technical experts.

As a member of the Net Zero Development Working Group, I support the proposed amendments to the Land Use Bylaw. Notably, development permit exemptions for exterior insulation and cladding. The working group is encouraged by The City's continued efforts to reduce governance barriers for net zero and high performance development.

We look forward to contributing to future work on the Land Use Bylaw.

Sincerely,

Dave Krasman
