

Supporting Data and Maps

Figures 1 and 2 present development permit activity within the R-CG and H-GO Districts for new housing. Figure 1 shows the number of applications submitted, while Figure 2 illustrates the total number of units proposed. The data covers the period from Q1 2023 through Q4 2025 to allow for comparison over time. The citywide rezoning took effect on 2024 August 6 (Q3 2024), which serves as a key reference point for interpreting trends. For this analysis, Multiple Dwelling Units are defined as any application within the H-GO District proposing three or more units. The data does not include new secondary suites, and unit counts exclude proposed secondary suites. Building permit data in Figures 11, 12 and 13 include suites.

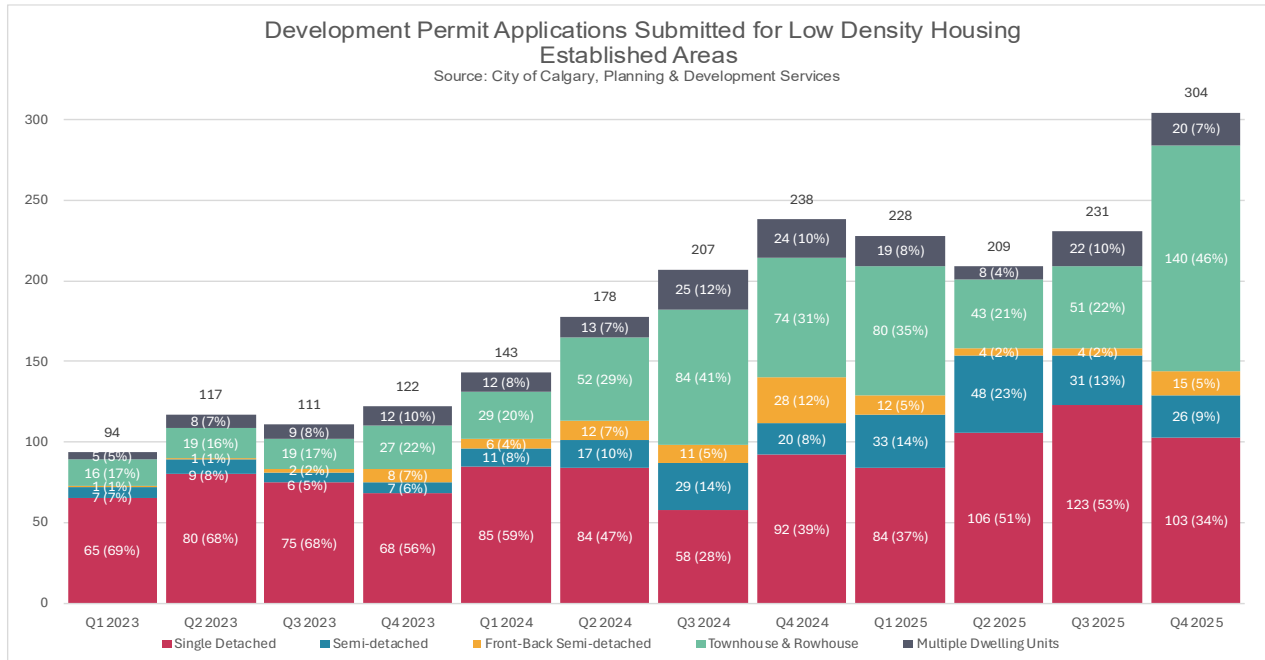

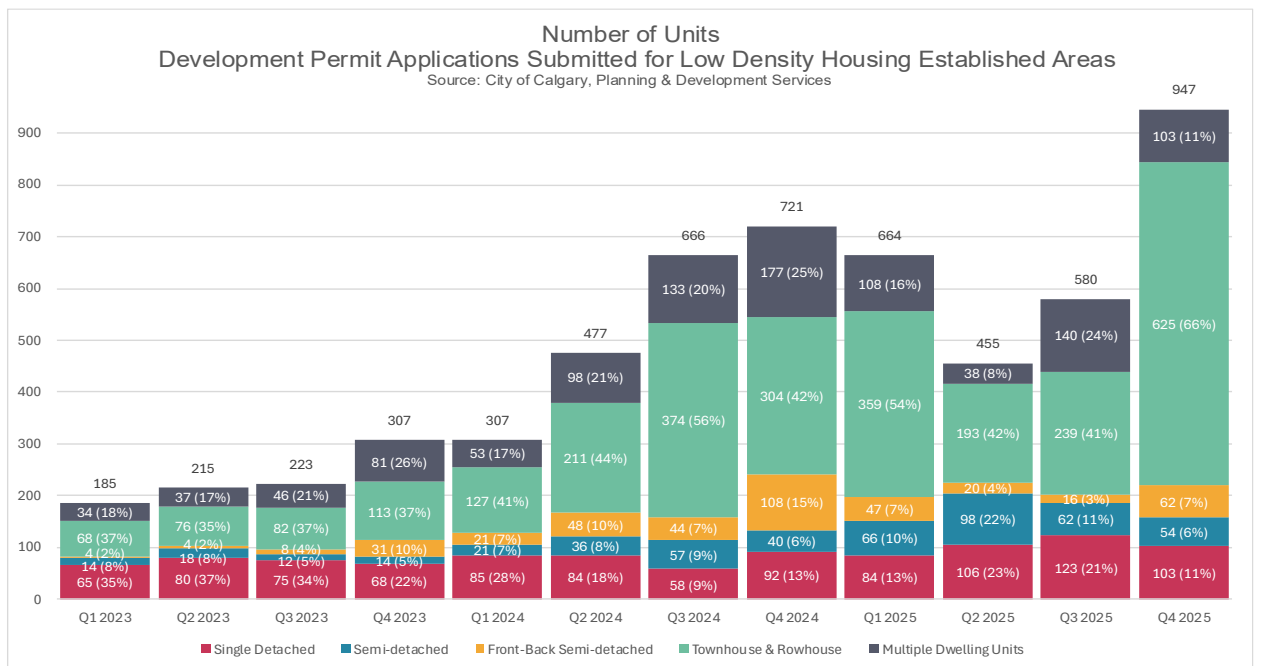

Figure 2 Number of Units - Development Permit Applications Submitted for Low Density Housing – Established Area

Figures 3 and 4 illustrate development permit applications within the R-CG and H-GO Districts for new housing that would have required a land use redesignation prior to the citywide rezoning. Figure 3 shows the number of applications submitted, while Figure 4 presents the total number of units proposed. The data covers Q1 2024 through Q4 2025 to capture all applications enabled by the citywide rezoning. Applications submitted before the effective date were placed on hold until August 6, 2024, when the rezoning came into effect.

Figure 3 Enabled by Citywide Rezoning - Development Permit Applications Submitted for Low Density Housing – Established Area

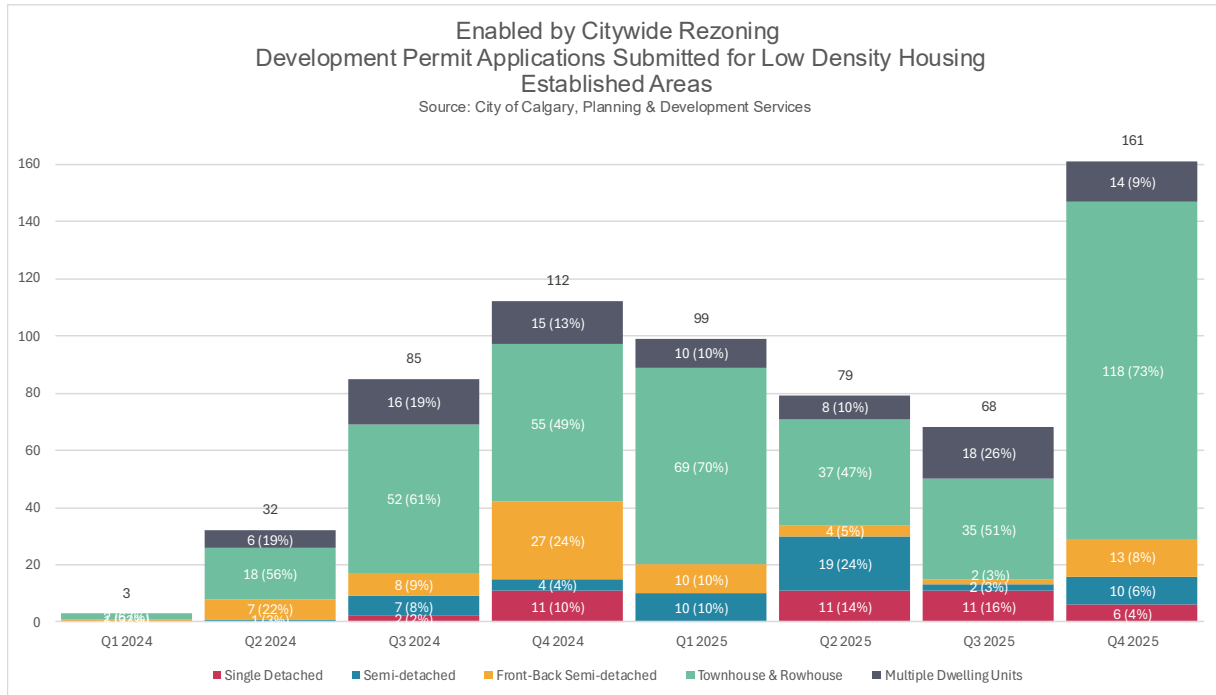

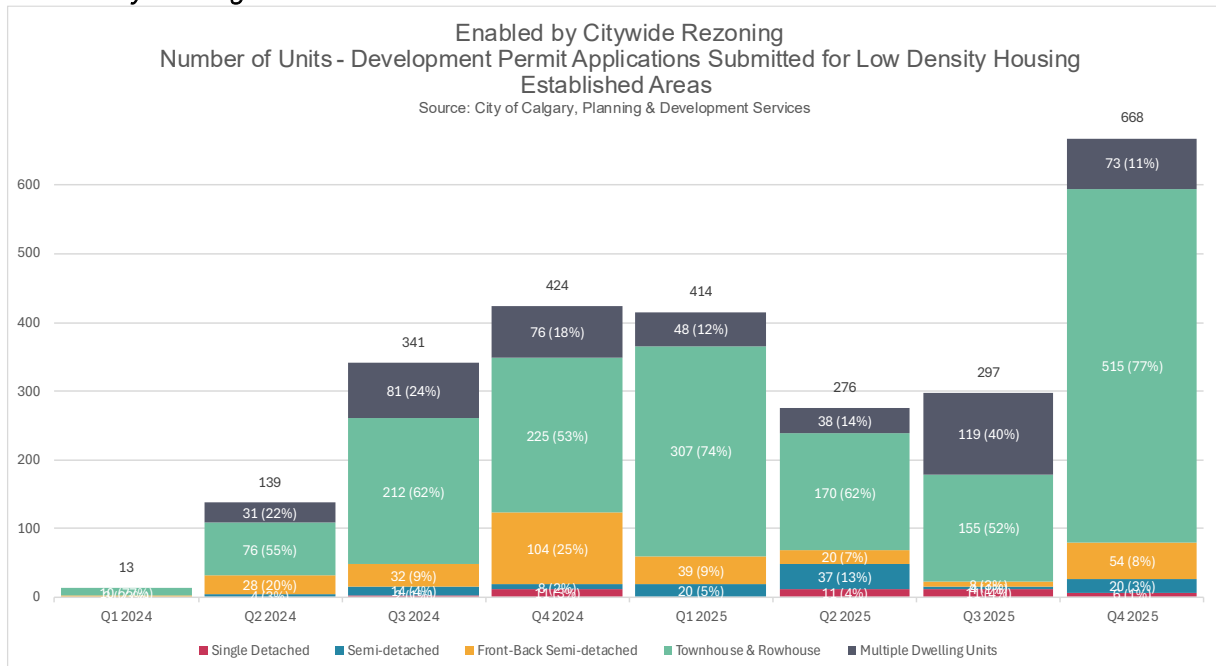

Figure 4 Enabled by Citywide Rezoning - Number of Units - Development Permit Applications Submitted for Low Density Housing – Established Area

Figures 5 and 6 compare the number of development permit applications submitted within the R-CG and H-GO Districts for new housing that would have required a land use redesignation prior to the citywide rezoning against the total number of applications. Figure 5 shows the application counts, while Figure 6 illustrates the number of units proposed. This comparison highlights the proportion of projects enabled by the rezoning relative to overall activity.

Figure 5 Overall Enabled by Citywide Rezoning – Development Permit Applications Submitted for Low Density Housing – Established Areas

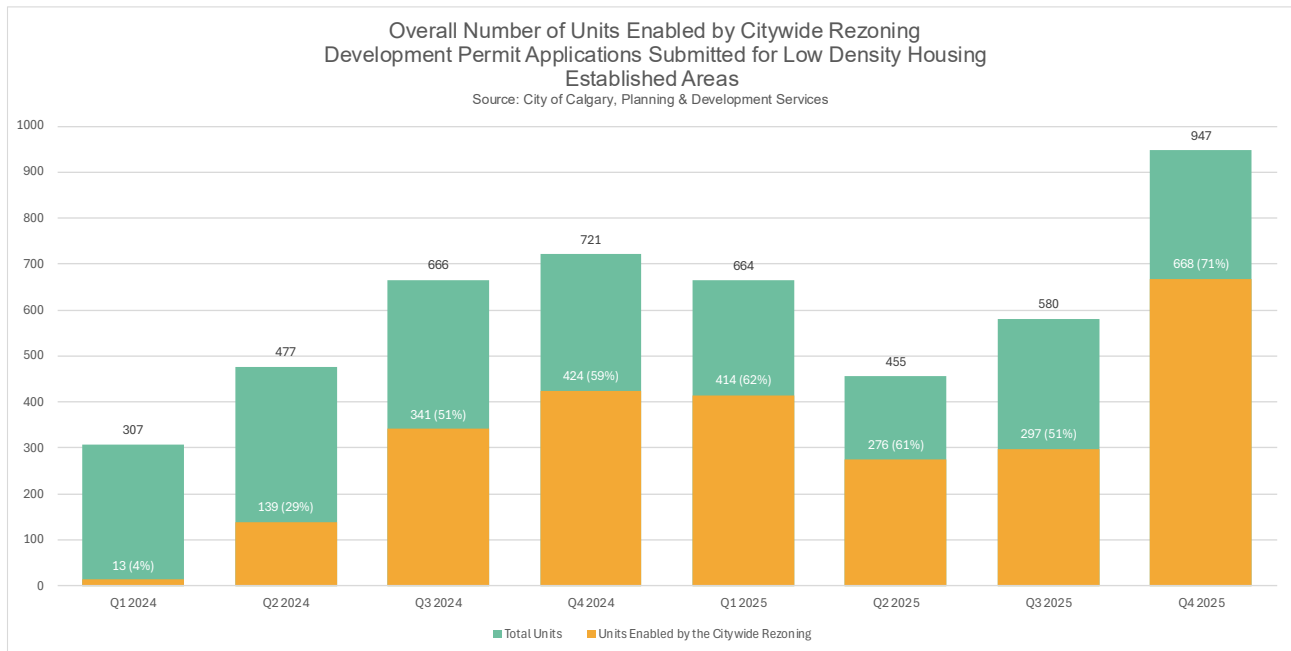

Figure 7 Total Proposed Units – Development Permit Applications – Submitted for Low Density Housing – 2025

Total Proposed Units - Development Permit Applications Submitted for Low Density Housing 2025

- Enabled by the Citywide Rezoning
- Not Enabled by the Citywide Rezoning

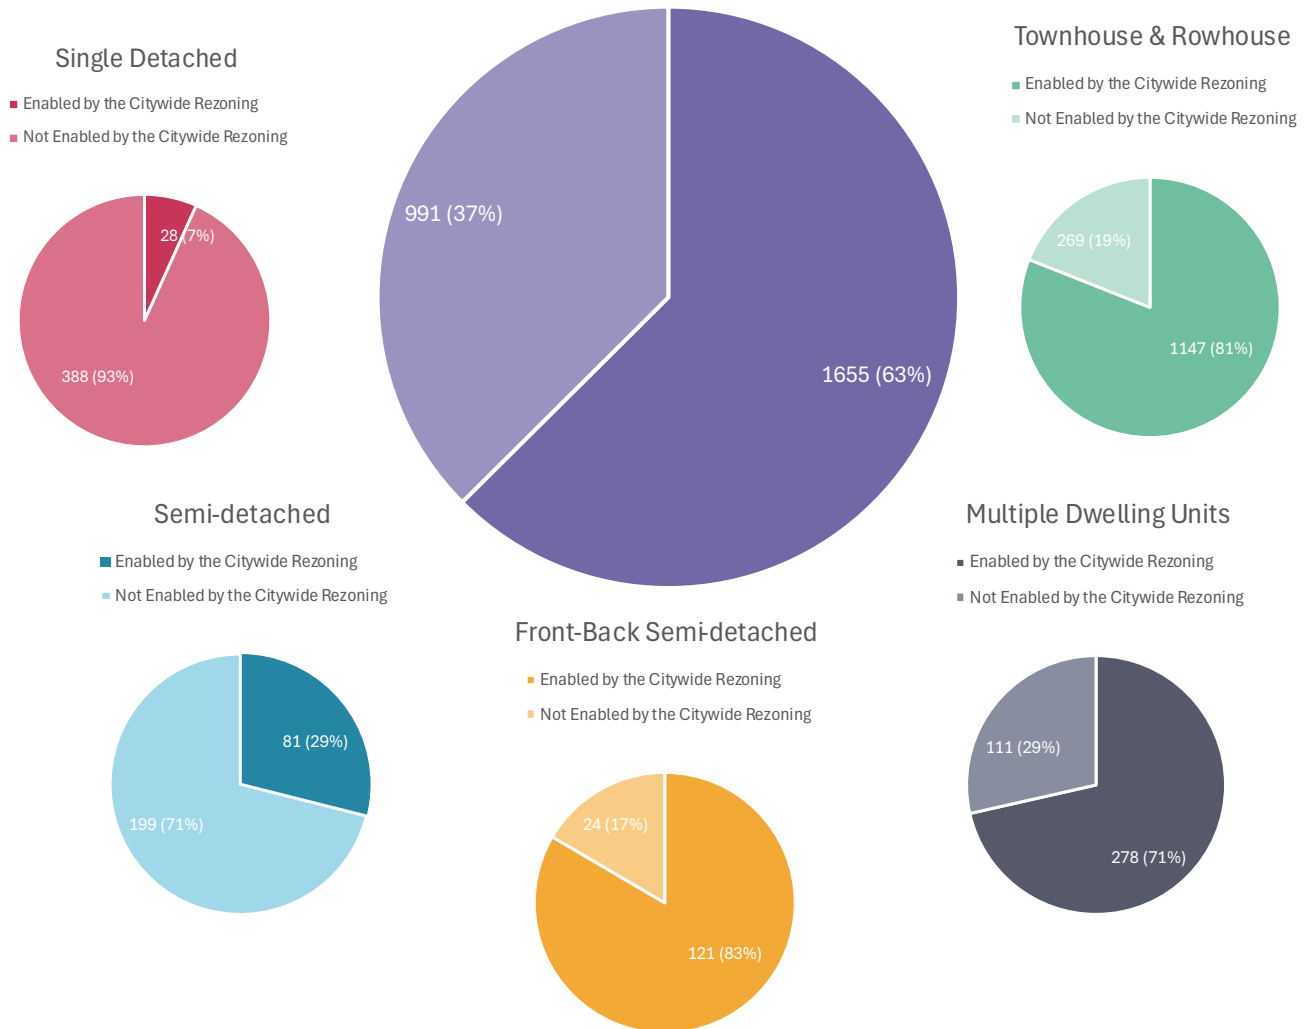

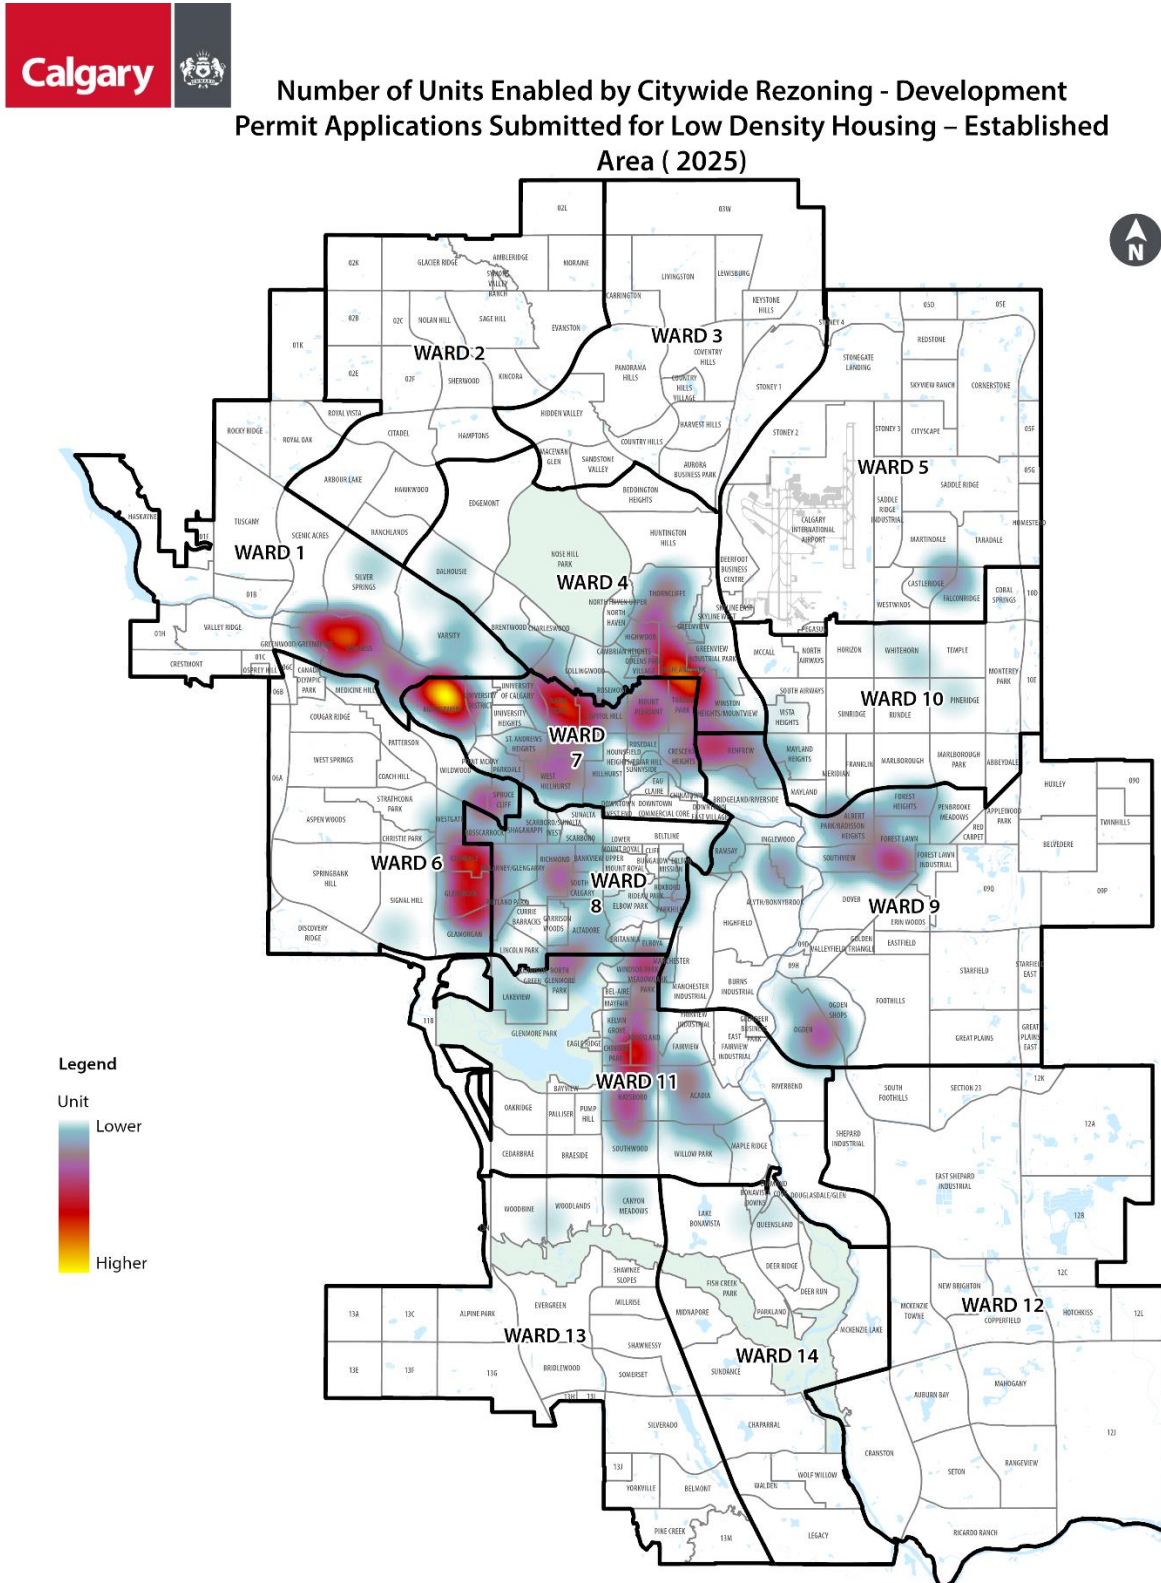

Figure 8 Map of Number of Units Enabled by Citywide Rezoning – Development Permit Applications Submitted for Low Density Housing – Established Area (2025)

Figures 9, 10, and 11 provide an overview of building permit activity within the R-CG and H-GO Districts for new housing. Figure 8 shows the number of units and secondary suites attached to issued building permit applications. Figure 9 illustrates the number of units and secondary suites associated with permits that would have required a land use redesignation prior to the citywide rezoning. Figure 10 presents the percentage of units that would have required a redesignation before the citywide rezoning. The first building permits enabled by the citywide rezoning were issued in Q4 2024, reflecting the time required for development permit review and approval prior to issuance.

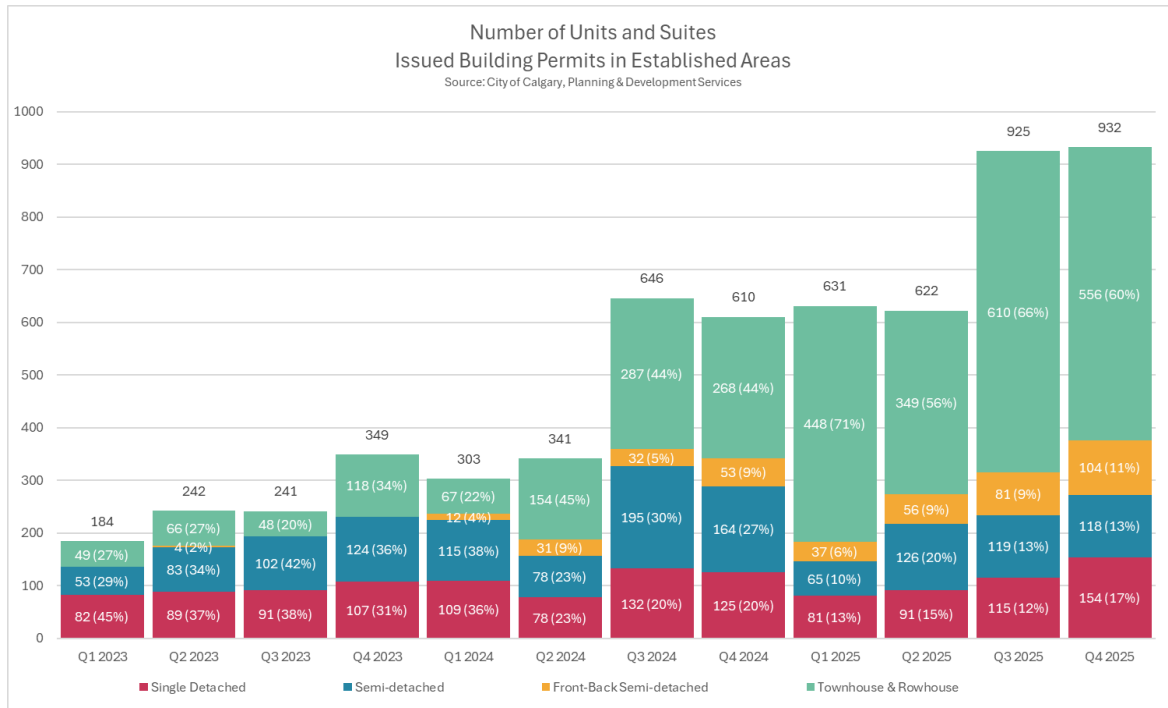

Figure 10 Number of Units and Suites Enabled by the Citywide Rezoning – Issued Building Permits in Established Areas

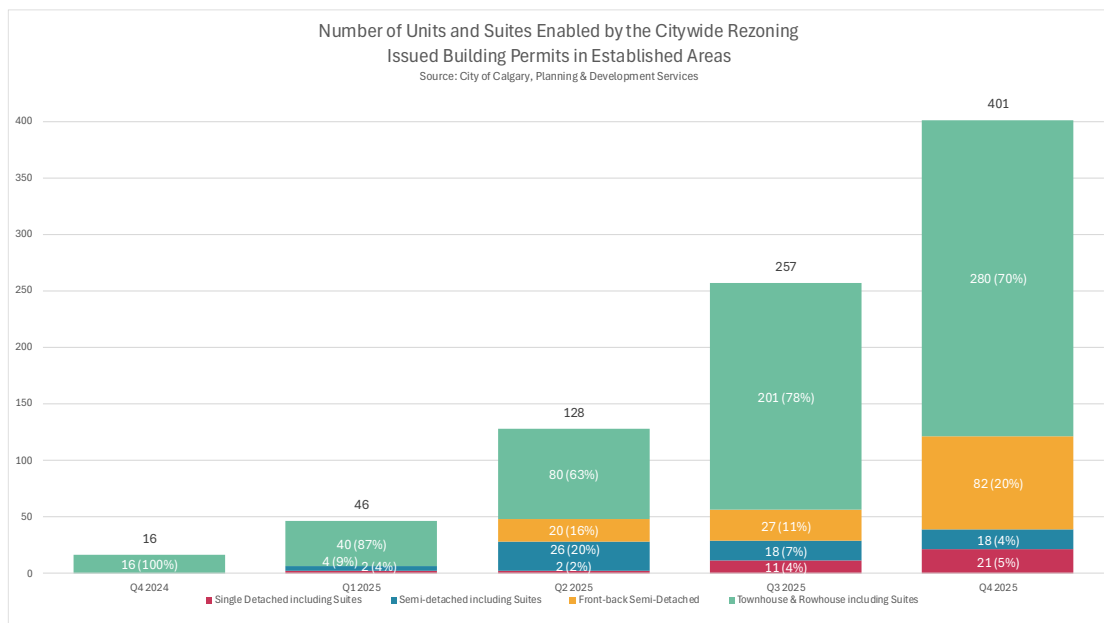

Figure 11 Overall Number of Units Enabled by Citywide Rezoning - Building Permit Applications Issued for Low Density Housing - Established Areas

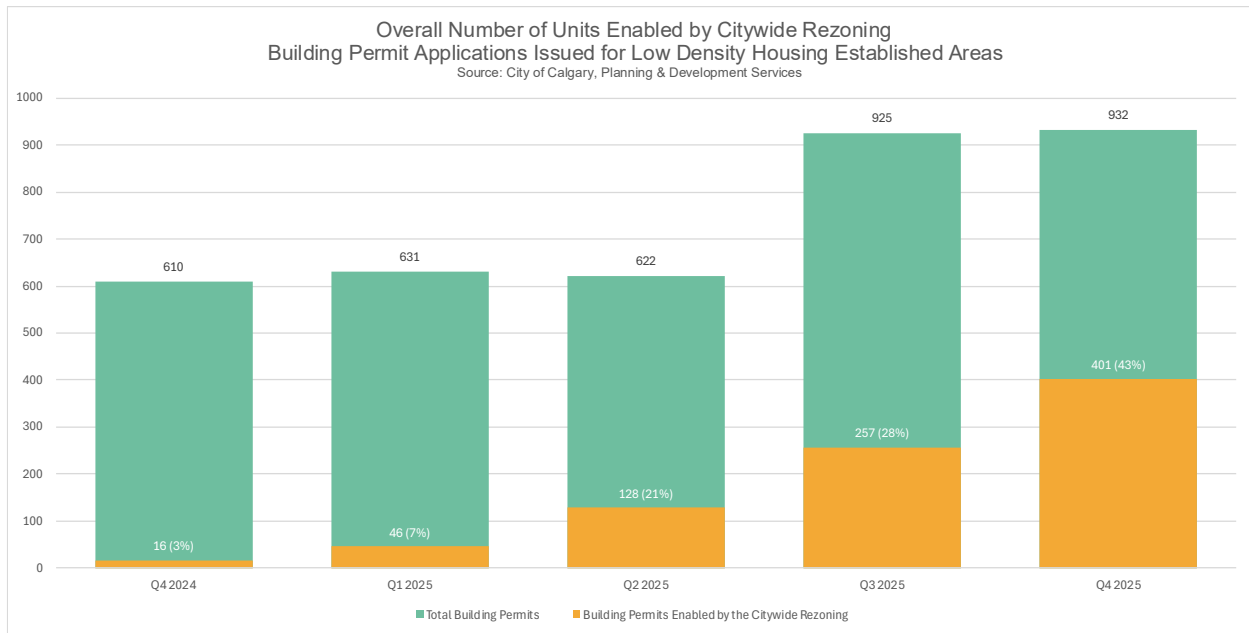

Figure 12 provides an overview of building permits that are complete and have occupancy within the R-CG and H-GO Districts for new housing enabled by the citywide rezoning. In 2025, 64 units have been completed that were enabled by the citywide rezoning. This will significantly increase as projects move from development permit to building permit to completion.

Figure 12 Overall Number of Units Enabled by Citywide Rezoning - Building Permit Applications Complete for Low Density Housing - Established Areas

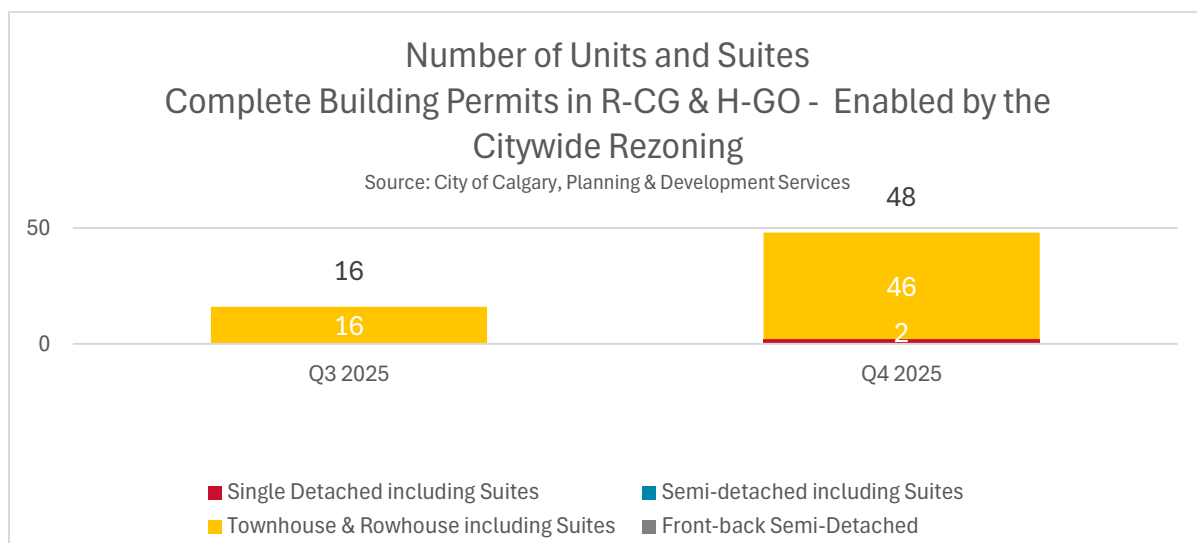

Figure 13 shows the number of days to decision for development permit applications within the R-CG and H-GO Districts for new housing. Review times are separated by housing type, and the number of approved applications is displayed on the same graph. The data indicates that the volume of approved applications increased noticeably in 2025.

Figure 13 Number of Days to Decision – Development Permits for Low Density Housing

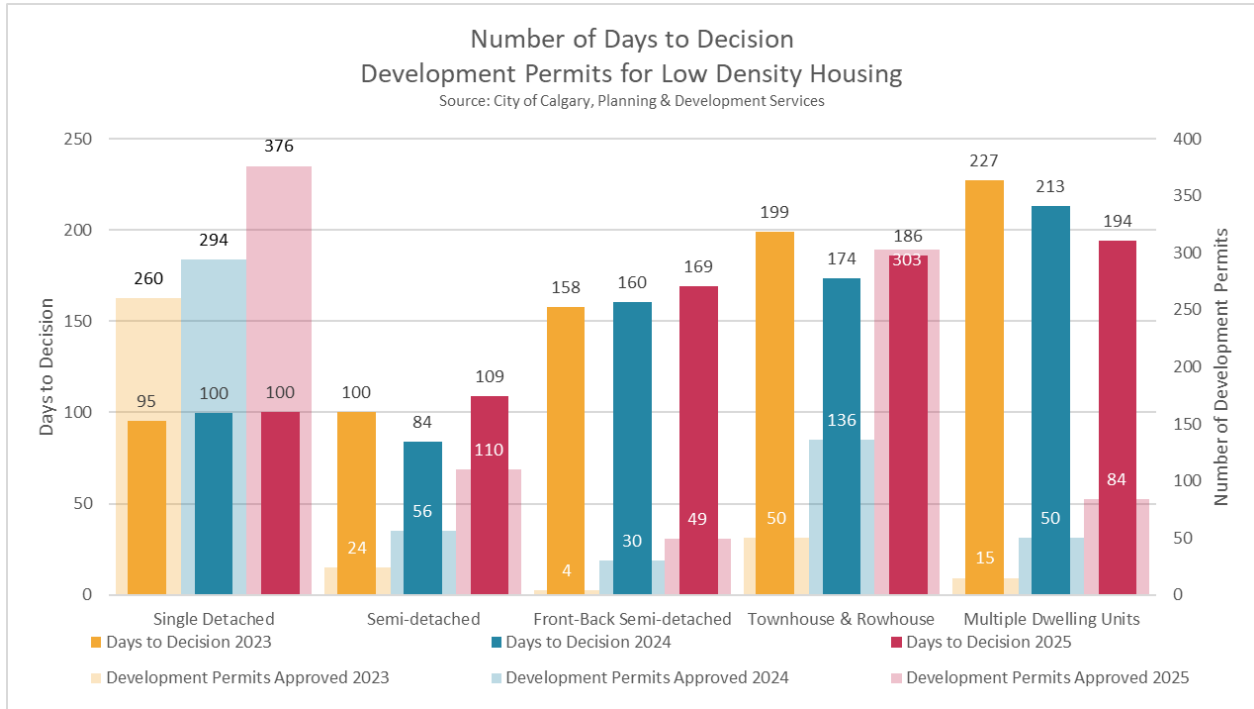

Figure 14 illustrates the areas of interest selected for comments submitted through the DMAP platform on development permit applications enabled by the citywide rezoning. A total of 1,531 comments expressed opposition, 153 were in support, and 88 were neutral.
